

NATIONAL INSTITUTE OF TECHNOLOGY, DELHI

MID-SEMESTER EXAMINATION

B. Tech (3rd Year): Semester-1 (2023)

Course Code: HML351

Course Name: Engineering Economics and Accountancy Max. Marks: 25

Time: 1 hour 30 minutes

Instructions: (1) Attempt all questions.

(2) Each question carries 5 marks.

(3) There are five questions in all.

(4) Use of Scientific/ normal calculator is allowed.

1. (a) Why is it not appropriate to consider the concept of depreciation when using discounted cash flow techniques?

(b) What is perpetuity and write down its formula?

© State whether True or False

- (1) For a given nominal interest rate, the more numerous the compounding periods, the less the effective annual interest rate.
- (2) If the internal rate of return is used to discount all cash flows associated with a project, the net present value of the project will be equal to zero.

(5)

2.(a) Expedia wants to set up a reserve that will help the company have an annual equivalent amount of Rs. 10,00,000 for the next 20 years towards its employee's welfare measures. The reserve is assumed to grow at the rate of 15% annually. Find the single-payment that must be made now as the reserve amount.

(b) Support your answer in part(a) with a proper cash flow diagram of the entire case.

© If you deposit Rs.10,000 today at 12 percent of interest rate, in how many years will this amount grow to Rs.80000? Work out this problem by using the rule of 72. Do not use the compound factor tables.

(3+1+2)

3. What are the advantages and limitations of using the NPV and IRR methods of capital budgeting? Give your assessment. (5)

4. A company requires an initial investment of Rs.40,000. The estimated net cash flow are as follows:

Year	Net Cash Flow (Figures in rupees)
1	7,000
2	7000
3	7000
4	7000
5	7000
6	7000
7	7000
8	15000
9	10000
10	4000

Using a 10% as the cost of capital (rate of discount) determine the following:

- (a) Pay Back Period
- (b) Net Present Value

(2+3)

5. (a) What is the fundamental difference between Sinking Fund Factor and Capital Recovery Factor?

(b) A granite company is planning to buy a fully automated granite cutting machine. If it is purchased under down payment, the cost of the machine is rupees 16,00,000. If it is purchased under an installment basis, the company has to pay 25% of the cost at the time of purchase and the remaining amount in 10 annual equal installments of rupees 2,00,000 each. Suggest the best alternative for the company using the present worth basis at $i=18\%$, compounded annually.

(1+4)

PRESENT VALUE TABLE

r = interest rate; n = number of periods until payment or receipt. (n)	Interest rates (r)									
	1%	2%	3%	4%	5%	6%	7%	8%	9%	10%
